Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                         WGS-discovery: Paired-end low-coverage whole genome shotgun reads were generated from 12981/69vmJ, C3H/Hed., and BALB/CBYJ. The WGS reads were placed uniquely on the MGSCV3 C52FL/6J assembly and SNP detection was carried out by SSAHA-SNP. 225,000 reads were
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       as STSs and 81,000 SNPs were annotated with alleles from C57BL/6J and the strain from which the particular read came. The validation rate for these SNPs was estimated at approximately 98%. Location/Qualifiers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Euteleostomi,

Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variations anotation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with corresponding to the overlapping clone, as we submit sequences with colly a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double stranded or sequenced with an alternate chemistry or covered by high quality democration problems, such as compressions and repeats, all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by resolve all sequencing problems, such as compression of the clone being a YaC.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at the prolice database can be found at the PROIL-23 Mouse BAC Library constructed by the group of Pierer de Jong.

On Nov 15, 2001 this sequence version replaced gi:15111975.

During sequence assembly data is compared from overlapping clones.

Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempte was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ó

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        FEATURES
                                                                                                                                                                                                                                COMMENT
assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em., EMBL; SW.; SWISSPROT; Tr., TREMBL; WP.; WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 10, constructed by the Sanger Centre Chromosome 10 Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chr10

RPI1-224P11 is from the library RPCI-11.1 constructed by the group of Pieter de Jong. For further details see http://www.chori.org/bacpac/home.htm

VECTOR: pBRCe3.6

IMPORTANT: This sequence is not the entire insert of clone RPI1-224P11 it may be shorted because we sequence overlapping sections only once, except for a short overlap. The true right end of clone RPI1-224P11 is at 156008 in this sequence. The true right end of clone RPI1-192N10 is at 131587 in this because the true right end of clone RPI1-192N10 is at 2000 in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Direct Submission

The sequence of this clone was established as part of a mapping and sequencing collaboration between the NHGRI Chromosome 7 Mapping Project (Eric D. Green, Director), John D. McPherson in the Department of Genetics (Washington University), and the Washington University Genome Sequencing Center. For additional information about the map position of this sequence, see http://www.nhgri.nih.gov, or see http://genome.wustl.edu/gsc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Description of the property of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           VECTOR: pBACe3.6
NEIGHBORING SEQUENCE INFORMATION:
NEIGHBORING SEQUENCE INFORMATION:
The clone sequenced to the left is RP11-115D14; the clone sequenced to the right is GS1-120K9, 200 bp overlap. Actual start of this clone is at base position 1 of RP11-221B19; actual end is at base position 13333 of GS1-120K9.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats, all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           NOTICE: This sequence may not represent the entire insert of this folone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Center code: WUGSC

It currently consists of 10 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

On May 13, 2003 this sequence version replaced gi:22855792.

The sequence in this sequence version replaced gi:22855792.

The sequence in this assembly is a combination of BAC based reads and whole genome shocqun sequencing reads assembled using Atlas in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Submitted (23-7AN-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA 3 (Dases 1 to 223768) Rat Genome Sequencing Consortium.

Direct Submission

AL Submitted (08-OCT-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

ON Sep 23, 2002 this sequence version replaced gi:21736944.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the fature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold', Mithin each contig-scaffold, individual sequence contigs are ordered and criented, and separated by sized gaps filled with Na to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence may extend beyond the ends of the clone and there may be sequence shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Unpublished

NOTE: This is a 'working draft' sequence. It currently consists of 4 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   NOTE: This is a 'working draft' sequence. It currently consists of 31 contigs. The true order of the pieces is not known and their order in this sequence record is
                                                                                                                                                                                     LOCUS AL732359 Accession AL732359

```

```
During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone amen. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with sequence submission only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems; such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em:, EMBL; Sw:, SWISSERCH; T::, TREMBL; Wp:, WORNPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/Celegans/wormpep Clone-derived length of monoucleonide A/T runs and conserved TA repeats. Where the this is found the longest good quality representation will be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               submitted.

Repeat names beginning 'Dr' were identified by the Recon repeat Repeat names beginning 'Dr' were identified by the Recon repeat beginscovery system (Zhirong Baco and Sean Eddy, submitted), and those beginning 'drr' were identified by Rick Waterman (Stephen Johnson lab, WashU). humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk

On Feb 21, 2002 this sequence version replaced gi:18477359.

During sequence assembly data is comparated synchronic sequences are found these are annotated as variations

together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and respeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em. EMBL; Sw.; SWISSPROT; Tr., TREMBL; Wp., WORMPEP; Information on the WORMPEP that the feature table with their source databases: Em. EMBL; Sw.; SWISSPROT; Tr., TREMBL; Wp., WORMPEP; Information on the WORMPEP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     http://www.sanger.ac.uk/Projects/C_elegans/wormpep RP23-155D19 is from the RPCI-23 Mouse PAC Library constructed by the group of Pieter de Jong.
For further details see http://www.chori.org/bacpac/home.htm
PORTANT: This sequence is not the entire insert of clone RP23-155D19 It may be shorter because we sequence overlapping sections only once, except for a short overlap.
The true left end of clone RP23-2405 is at 155495 in this sequence.
The true right end of clone RP23-2405 is at 2000 in this
                                 AL606512 157494 bp DNA linear ROD 16-FEB-2002 Mouse DNA sequence from clone RP23-155D19 on chromosome 11, complete sequence.

Detecting and differentiating between colon cell proliferative disorders associated with a gene or its regulatory regions comprises contacting a target nucleic acid in a biological sample obtained from the subject with a reagent

Claim 32; SEQ ID NO 312; 74pp; English.

The invention relates to a novel method for detecting and differentiating between colon cell proliferative disorders associated with at least one gene or its regulatory regions. The method comprises contacting a target nucleic acid in a biological sample obtained from the subject with at least one reagent or a series of reagents, where the reagent or series of ringuishes between methylated and non methylated CpG dinucleotides within the target nucleic acid. The molecules of the invention demonstrate optostatic activity whilst the method may useful for detecting and differentiating between colon cell proliferative

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, Alzheimer's disease, Alzheimer's disease, and inflammatorid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention
disorders, including cancers such as colon adenoma and colon carcinoma. The PNA (peptide nucleic acid)-oligomers are useful as probes for determining cycosine methylation state or single nucleotide polymorphisms. The current sequence is that of the pretreated genomic DNA region of the invention. This sequence is not shown within the specification but is taken from Wipoweb.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Nucleic acid comprising fragment of chemically modified gene, useful for diagnosis and treatment of diseases associated with abnormal cytosine methylation.

The invention relates to isolated polymuclectide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PRF) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). (II) the polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal cutivity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food of sites expressing (II). (I) and its binding partners are useful for treating disorders of sites expressing (II). (I) and (II) are useful for treating disorders of sites expressing (II). (I) and of sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess blidiversity responsible for genetic disorders or other traits to assess blidiversity responsible for genetic disorders or other traits to assess blidiversity conding sequences. Assidig-7-Assids represent novel human diagnostic coding sequences. Assidig-7-Assids represent movel human diagnostic coding sequences. Assidight from WhO at the sequence data for this electronic format directly from WhO at the printed specification, but was obtained in electronic format directly from WhO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

                                                                                                                                                                                           sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II) The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed cannot be a special in gene therapy techniques to restore normal cartivity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polymeptide in tissue, as molecular weight markers and as a food suppeptide in tissue, as molecular weight markers and as a food of stress expressing (II) il) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in casponsible for genesic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and in the cast of the contract of the contract of the cast 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to isolated polynucleotide (I) and polypeptide (II)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 human diagnostic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              amino acid sequences. ÅAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human, chromosome mapping, gene mapping, gene therapy, forensic, food supplement, medical imaging, diagnostic, genetic disorder, ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated polynuclectide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 2711 BP; 1024 A; 662 C; 442 G; 583 T; 0 U; 0 Other;

This sequence represents the coding sequence for the human G-protein coupled receptor HIRBF3. The encoded protein is a 7-transmembrane domain receptoral Pyrotein coupled receptors include a wide range of biologically active receptors include a wide range of biologically active receptors include a wide range of biologically active receptors have conserved cysteins residues in neuroreceptors. Most of the receptors have conserved cysteins residues in the first two extracellular loops, which form disulphide bonds thought to stabilise the functional protein structure. Phosphorylation or lipidation of chase residues can influence the signal transduction of some G-protein coupled receptors are found at numerous system. Compounds that activate or inhibit the concoded receptor may be used for the treatment of patients which need to activate or inhibit a G-protein coupled receptor. Mutations in this sequence or the encoded protein may be identified by sequence analysis.

Concomment of hypertension, angine pectoris, myocardial infarction, stroke, eating disorders, cancer and benign hypertrophy. Agonists of the encoded protein may be used in the treatment of parkingon; disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          encoded protein may be used in the treatment of Parkinson's disease, acute heart failure, hypotension, urinary retention and osteoporosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human G-protein coupled receptor, HIBEF51 - used to identify (ant)agonists, used in the treatment of asthma, angina pectoris, psychotic and neurological disorders, and eating disorders etc.
                                                                                                                                                                                                          /transl_except= seq: 1600. .1602, aa: Thr

The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, Alzheipspy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/hucerative bowel diseases. The present sequence is a gene of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ds, antidiabetic, hypotensive, cardiant, vasotropic, cytostatic, antilipemic, mTOR kinase activator; raptor proteal,, mTOR kinase activator; raptor protesh, manamalian rapamycin target protein; mTOR; phosphorylation, p7086 kinase, eIF-4EBP; insulin receptor signalling, signaling pathway, diabetes;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       chemically modified gene, useful for associated with abnormal cytosine
                                                                                                                                             Human, immune system disease, cytosine methylation, antiasthmatic, antiarteriosclerotic, antianaemic, cytostatic, nootropic, neuroprotective, anti-HIV; anticonvulsant, ophthalmological, antirheumatic; antiathritic, antidiabetic; antipsoriatic; antiinflammacory, cancer; eye disease, arteriosclerosis; anaemia, acute myeloid leukaemia, Alzheimer's disease, AIDS; epilepsy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 80.0%; Score 16.8; DB 6; Length 5756; 90.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the disgnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid theukaemia, Alzhaimer's disease, Alzhailepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a novel human or mouse raptor protein or a sequence derived from these by addition, deletion and/or substitution of one or more amino acid residues and binds to a mammalian rapamyoin target protein (mTOR) or to the mTOR signaling motif (TOS motif). mTOR is a kinase which regulates the phosphorylation of p7056 kinase and eIF-4EBP, which control cellular functions in response to signaling by receptors for insulin and amino acids respectively. The raptor proteins are useful for the treatment, prevention and diagnosis of diseases associated with hyperlipemia, heart disease, cancer and restenosis. The DNA encoding the raptor proteins is useful for the detection of pathological single nucleotide polymorphisms (SNP) in raptor. This sequence corresponds to a genomic fragment of the human mTOR sequence.
                                                                                                                                                                                                                                                                                 Raptor protein which binds to a mammalian target of rapamycin, useful for the treatment, prevention and diagnosis of diabetes, hypertension and cancer and treatment of restenosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 50000 BP; 11873 A; 10980 C; 12056 G; 15090 T; 0 U; 1 Other;

                                                                                                WO2003016475-A2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    GENBANK; X56351.
                                                     Homo sapiens.
                                                                                                                                                   27-FEB-2003.
  The invention discloses a composition comprising two or more isolated rate or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelior variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially resplated in an animal subjected to pain and a but to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that increases or decreases the expression of the polynucleotide sequence that increases or decreases the expression of a polynucleotide sequence which is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound or small molecule that regulates the activity of one or more of the polypeptides or identifying a compound or small molecule that regulates the activity of one or more of the polypeptides or identifying a compound useful in treating pain an animal of one or more of the polypeptides or more oplypeptides or their antibodies. The polynucleotide or the compound that molypeptides or their antibodies is a method for identifying a compound useful in treating pain (e.g. spinal segmental nerve injury (fung), chronic constriction injury (fCI) and spared nerve injury (fMI) in an animal (e.g. gene therapy). The sequence presented is a human DNA (shown in Table 2 of the specification) which a segmental nerve injury (fMI) in an animal enterior which is differentially expressed during pain. Note: The sequence data for this parent did not form part of the polypeptides of the invention of the polyment of
                                                                                                                                                                                                                                                                                                                                                                                                   New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

The invention discloses a composition comprising two or more instruction derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polymucleotide, and is derivative or allelic variation of the nucleic acid sequence. Also comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a that increases or decreases the expression of the polymucleotide sequence that increases or decreases the expression of the polymucleotide sequence which is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound that regulates the expression of a polymucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a pharmaceutical composition, a method for producing a pharmaceutical composition, a method for producing a pharmaceutical composition, a method for identifying a compound that regulates the activity of one or more of the oplympetides or their antibodies. The polymucleotide given in the activity in an animal of one or more of the polympetides of the polympetides given in the activity in an animal of one or more of the polympetides of the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (GNUDS), chronic construction the represented is a human DNA (shown in Table 2 of the specification) which encodes one of the polympetides of the invention which sidifferentially expressed during pain. Note: The sequence data for this patent did not form part of the polympetides of the invention of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        0

Homo sapiens.

The invention discloses a composition comprising two or more isolated rate or human polymucleotides or a polymucleotide which represents a fragment, and an allelic variation of the mucleic acid sequence. Also claimed are a vector comprising the model polymucleotide, a host cell comprising the vector, a method for identifying a mucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that is differentially expression of the polymucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polymucleotide sequence which is differentially compound for identifying a compound that regulates the activity of one or more of the polymucleotides, a method for producing a pharmaceutical composition, a compound for identifying a compound or small molecule that regulates the compound or small molecule that regulates the specification, a method for identifying a compound or small molecule that regulates the specification, a method for identifying a compound useful in treating contribution or man a pharmaceutical composition comprising the one or more of the polypeptides or the compound that modulates its activity is useful for preparing a medicament for treating continuates its activity is useful for preparing a medicament for treating continuation which method for identifying a human DNA (shown in Table 2 of the polymetication) which encodes one of the polymetic for differentially expressed during pain. Note: The sequence data of the rink in the invention of the rink in the control of the printed specification, which has directly from MIPO at ftp.wipo.int/pub/published_pct_sequences.

The invention discloses a composition comprising two or more isolated rat or human polynucleotides or a polynucleotide which represents a fragment, continued are a vactor contributed by the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially a compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the composition, a method for producing a pharmaceutical composition, a method for identifying a compound or small molecule that regulates the activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more of pain and a pharmaceutical composition comprising the one or more of the polypeptides or their antibodies. The polymoticotides given in the specification, an each of reaching the polymoticotides or their and spared nerve injury (Chung), chronic constriction contributes its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction therapy). The sequence presented is a human DNA (shown in Table 2 of the specification) which encodes one of the polypeptides of the invention contained in electronic form directly from WiPo at the spatent did not form part of the printed specification, but was obtained in electronic form directly from wiPo at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gapa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 1932 BP; 500 A; 495 C; 477 G; 460 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a nucleic acid (I) comprising a segment of 18 bases of chemically pretreated DNA of angiogenesis-associated genes (II) having sequences (ABQ66971-ABQ67178) or their complements. (I), also related oligomers, are used to evaluate the methylation status and/or single-nucleotide polymorphisms, in angiogenesis-related genes, for diagnosis and treatment of eye diseases, proliferative retinopathy, neovascular glaucoma, solid tumours, inflammation, rheumatoid arthritis, diabetic retinopathy, macular degeneration caused by neovascularisation, psoriasis, arteriosclerosis, inflammatory bowel diseases, ulcers and crohn's disease. Note: The sequence data for this patent did not form

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-BAB12017). The sequence data for this parent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 3,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 3, Application US/08302832
; Sequence 3, Application US/08302832
; Patent No. 5603938
; GENERAL INFORMATION:
    APPLICANT: Barenkamp, Stephen J
    TITLE OF INVENTION: High Molecular Weight Surface Proteins
    TITLE OF INVENTION: of No. 5603938-Typeable Haemophilus
    NUMBER OF SEQUENCES: 8
    CORRESPONDENCE ADDRESS:
    ADDRESSEE: Shoemaker and Mattare, Ltd.
    STREET: 2001 Jefferson Davis Hwy., 1203 Crystal Plaza
    STREET: Bldg. 1
    CITY: Arington
    STREET: VIGINIA
    STREET: VIGINIA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 3, Application US/08617697
Patent No. 5977336
GENERAL INFORMATION:
APPLICANT: Barenchamp, Stephen J
TITLE OF INVENTION: High Molecular Weight Surface Proteins
TITLE OF INVENTION: of No. 5977336-Typeable Haemophilus
NUMBER OF SEQUENCES: 11
CORRESPONDENCE ADDRESS:
ADDRESSEE: Shoemaker and Mattare, Ltd.
RESULT 6

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    US-VOS-175-41-3

Sequence 3, Application US/08719641

Patent No. 6218141

GENERAL INFORMATION:

GENERAL INFORMATION:

APPLICANT: Barenkamp, Stephen J

TITLE OF INVENTION: High Molecular Weight Surface Proteins

TITLE OF INVENTION: of No. 6218141-Typeable Haemophilus

NUMBER OF SEQUENCES: 10

CORRESPONDENCE ADDRESS:

STREET: Shoemaker and Mattare, Ltd.

STREET: Bldg. 1

CITY: Alington

STREET: Alington

STATE: Virginia

COUNTY: US.A.

INDIA 12220-10286

COMPUTER READABLE FORM:

MEDIUM TYPE: Flopy disk

COMPUTER: ISBN PC compatible

OPERATING SYSTEM: PC-DOS/MS-DOS

SOFTWARE: PATENTIN Release #1.0, Version #1.30

CURRENT ARPLICATION DATA:

FILING DATE:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Barenkamp, Stephen J
TITLE OF INVENTION: High Molecular Weight Surface Proteins
TITLE OF INVENTION: of No. 5603938-Typeable Haemophilus
TITLE OF INVENTION: of No. 5603938-Typeable Haemophilus
ONRESPENDENCES:
ADDRESSE: Shoemaker and Mattare, Ltd.
STREET: 2001 Jefferson Davis Hwy., 1203 Crystal Plaza

GENERAL INFORMATION:

* Sequence 1. Application US/08617697

* Patent No. 5977336

GENERAL INFORMATION:

* APPHICANT: Barenkamp, Stephen J

* TITLE OF INVENTION: of No. 5977336-Typeable Haemophilus

* TITLE OF INVENTION: of No. 597736-Typeable Haemophilus

* TITLE OF INVENTIO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  DB 2; Length 5116;

SEQUENCE 185265, Application US/10027632

Publication No. US20020198371A1

JERNERAL INFORMATION:
APPLICANT: Wang, David G.
TITLE OF INVENTION: Identification and Mapping of Single Nucleotide
TITLE OF INVENTION: Polymorphisms in the Human Genome
PILE REFERENCE: 10827.129

CURRENT APPLICATION NUMBER: US/10/027,632

CURRENT APPLICATION NUMBER: US 60/218,006

PRIOR PAPLICATION NUMBER: US 60/198,676

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Description
